

## Benefit vs Constraint Framework

By Paul Paskevicius

*Primary rules:*

Benefit = Time [gained]

Constraint = Time [spent]

*Types of Time:*

$X$  = prior time units spent

Debugging time >  $X$  = Constraint

Downtime >  $X$  = Constraint

Run time <  $X$  = Benefit

Manual entry time <  $X$  = Benefit

Execute Time <  $X$  = Benefit

If benefit[time] > constraint[time]

*Then;*

**Execute**

*Else;*

**Revert**
